Neuma Begins 20th Year of CM/ALM Excellence

May 11, 2009

Ottawa, Canada

NEUMA CM+ TECHNOLOGY TO ADDRESS BROADER MARKET

As the week begins, Neuma enters its 20th year of CM/ALM excellence. Neuma's CM+ technology, on top of it's STS Engine, has helped Neuma maintain leadership in CM and ALM technology and process guidance.

This, Neuma's 20th year, will see the introduction of technology advances that will continue to propel Neuma ahead of the pack, not just in the CM and ALM application domains, but also in wider domains that Neuma plans to compete in as part of it's 20th year milestone.

"Neuma has come a long way over the past two decades, but it's amazing to see that as our technology innovation and layering continues, our capabilities are growing faster and faster," said Joe Farah, Neuma's President and CEO. "A lot of technologies were conceived for a specific purpose and their architectures max out after a few years. Neuma has paid special attention to advancing its technology architecture so that rather than maxing out, our products continue to leap forward at an ever-increasing rate."

Neuma is expected to make a significant advance in the CM/ALM world as it unleashes its 4th Generation product, CM+ 7, in the next few weeks. In the past months, CM+ Enterprise has become the only SCM tool with CMII certification, and has demonstrated, at CMII World 2008, how it is a key tool for all roles of a development project, from upper level management to product manager to to CM Manager to developer to tester.

Neuma is also expected to bring some new life into the world of repository capabilities sometime during the next 12 months. Although, Neuma is not yet releasing details, Neuma's STS Engine has long been a candidate for dramatic advances in the database world, as it integrates next generation database technology with GUI Generation capability and Process Engine support.

"We've got a great engine," noted Farah. "It's really been more of a timing thing, than a product readiness item. And in our 20th year, you'll see Neuma emerge from its CM/ALM portfolio into a much broader market."

Neuma's STS Engine includes superior reliability, performance, global operation capabilities, and database capabilities and has a fair chance at cracking open the traditional RDBMS cocoon the IT industry currently finds itself in. "This will come at a time when the corporate world needs to upgrade it's data capabilities, while at the same time it rationalizes its resource overhead," added Farah.

What else is in store during Neuma's 20th year celebration? "We've got even bigger things that we're not talking about yet - but that will rock the industry," noted Farah.

Neuma's 20th year celebration may well put the company on the map as it expands its focus.

Neuma Technology Inc. is a pioneer and leader in providing advanced Configuration Management technology. It's flagship product, **CM+ Enterprise**, first released in 1991, provides end-to-end Application Lifecycle Management in a small footprint, configurable and easy-to-use package.
